Figure 1: Schematic diagram of the proposed 3D printed microfluidic chip. The diagram shows a cross-section of the chip with a central channel. The channel is divided into four segments with lengths of 2.1, 3.3, 3, and 3 NM. The total length of the channel is 11.7 NM. The channel is flanked by two walls, each 3.04 NM thick. The channel is connected to a reservoir on the left and a waste outlet on the right. The waste outlet is labeled 'WASTE' and has a diameter of 179 NM. The channel is labeled 'JUKNO' and 'RW18'. The channel is also labeled 'TCH 37' and '3500'. The channel is also labeled '3000' and '1940'.
